UI/UX Designer

Portfolio 2026

QUACH DANG HOANG MY

About me

Hello, I'm

Hoang My

I'm a UI/UX Designer with **5 years of experience** in UI/UX and Visual Design. I specialize in leading projects from idea to launch, building design systems, and collaborating with cross-functional teams to create polished, user-friendly digital products.

Education

Information System — 2007 – 2011
Van Hien University

Computer Science — 2013 – 2015
Hutech University

Language

English
Limited Working Proficiency

Chinese
Elementary

Certifications

Google UX Design
2023 · Issued by Google

Foundations of Project Management
2023 · Issued by Google

Google AI Essentials
2025 · Issued by Google

Skills & Tools

DESIGN

UI Design · UX Design · Animation · Graphic Design (Print & Digital)

DEVELOPMENT

Coding HTML/CSS/JS

WORKING STYLE

Problem Solving · Teamwork · Research & Analysis · Time Management

TOOLS

Figma · Zeplin · Photoshop · Illustrator · After Effect · CapCut · Visual Studio
Chat GPT, Gemini, Claude

Experience

01/2025 - 02/2026

Ohmyhotel | Product Designer

- Designed UI/UX for B2C/B2B platforms, ensuring consistency through design systems and optimization via A/B testing.
- Worked with the Korean planning team and developers to report and fix UI bugs.
- Created marketing materials for brand campaigns.

07/2024 - 04/2025

Bravesoft | UI/UX Designer

- Worked with clients in Japan to gather requirements, create design concepts, and refine products based on feedback.
- Translated requirements into high-fidelity UI designs and prototypes, then collaborated with developers for a smooth handoff.

01/2021 - 02/2023

FPT Software [Utop] | UI/UX Designer

- Developed wireframes and prototypes to create intuitive, consistent user experiences across all platforms and devices.
- Collaborated with BA, PM and developers to ensure accurate design delivery.
- Designed banners and event visuals to support brand and communication needs.

03/2020 - 12/2020

BusMap | UI/UX Designer

- Designed UI/UX for websites and mobile apps, collaborating with developers to ensure designs were implemented accurately.
- Created the design of various marketing materials, including brochures, proposals, and event visuals.

06/2016 - 03/2020

Vietravel | Software Specialist

- Designed UI/UX for web and mobile, including converting designs to code (HTML/CSS/JS) and ensuring accurate implementation with developers.
- Managed internal projects and provided IT and administrative support for various departments.

2012 - 2016

Earlier Roles

- Gotadi - UI/UX Designer (01/2016 - 06/2016): developed new website features in PHP, SQL, HTML, CSS and JS.
- Spiraledge - Photo Retoucher (03/2012 - 09/2013).

What I Do

Working flow

Web & app design

STEP 01
Discover & clarify
Align with PM/BA on goals, users and constraints; clear up unclear points.

STEP 02
Map user flows
Define flows to catch missing cases, backed by user behavior research.

STEP 03
Wireframe & prototype
Wireframes and interactive prototypes for stakeholder review.

STEP 04
Hi-fi UI & design system
Finalize the UI on a documented design system for consistency and reuse.

STEP 05
Hand off & QA
Hand off to developers, then review builds and report UI bugs.

STEP 06
Measure & iterate
Use feedback, A/B testing and analytics to keep improving the design.

How I do UX research

Interviews & usability tests
On existing products or prototypes, to observe real user behavior.

Surveys
Gather user feedback and qualitative insights.

Analytics tools
Microsoft Clarity and Google Analytics to see how users interact.

A/B testing
Test design variations, then use data clustering to find what to improve.

iOS

AI Record

This tool listens to your conversations and turns them into neat, easy-to-read summaries in seconds. Everyone can speak in their own language, and the app will organize everything into clear takeaways and to-do lists. You can easily read and share the final notes in English, Vietnamese, Korean, or Chinese so your whole team stays on the same page.

ROLE
Design & build, end to end

PLATFORM
iOS 17+

BUILT WITH
Native SwiftUI

STATUS
Coming soon on App Store

Key features

Auto language detection
Detects the spoken language on its own

AI summaries
Key takeaways in EN · VI · KO · ZH

Export anywhere
Markdown & PDF

Light & Dark mode
Comfortable in any setting

Design & build

Designed and vibe-coded end to end by me. Native SwiftUI for iOS 17+, with a clean, focused recording flow.

What it does

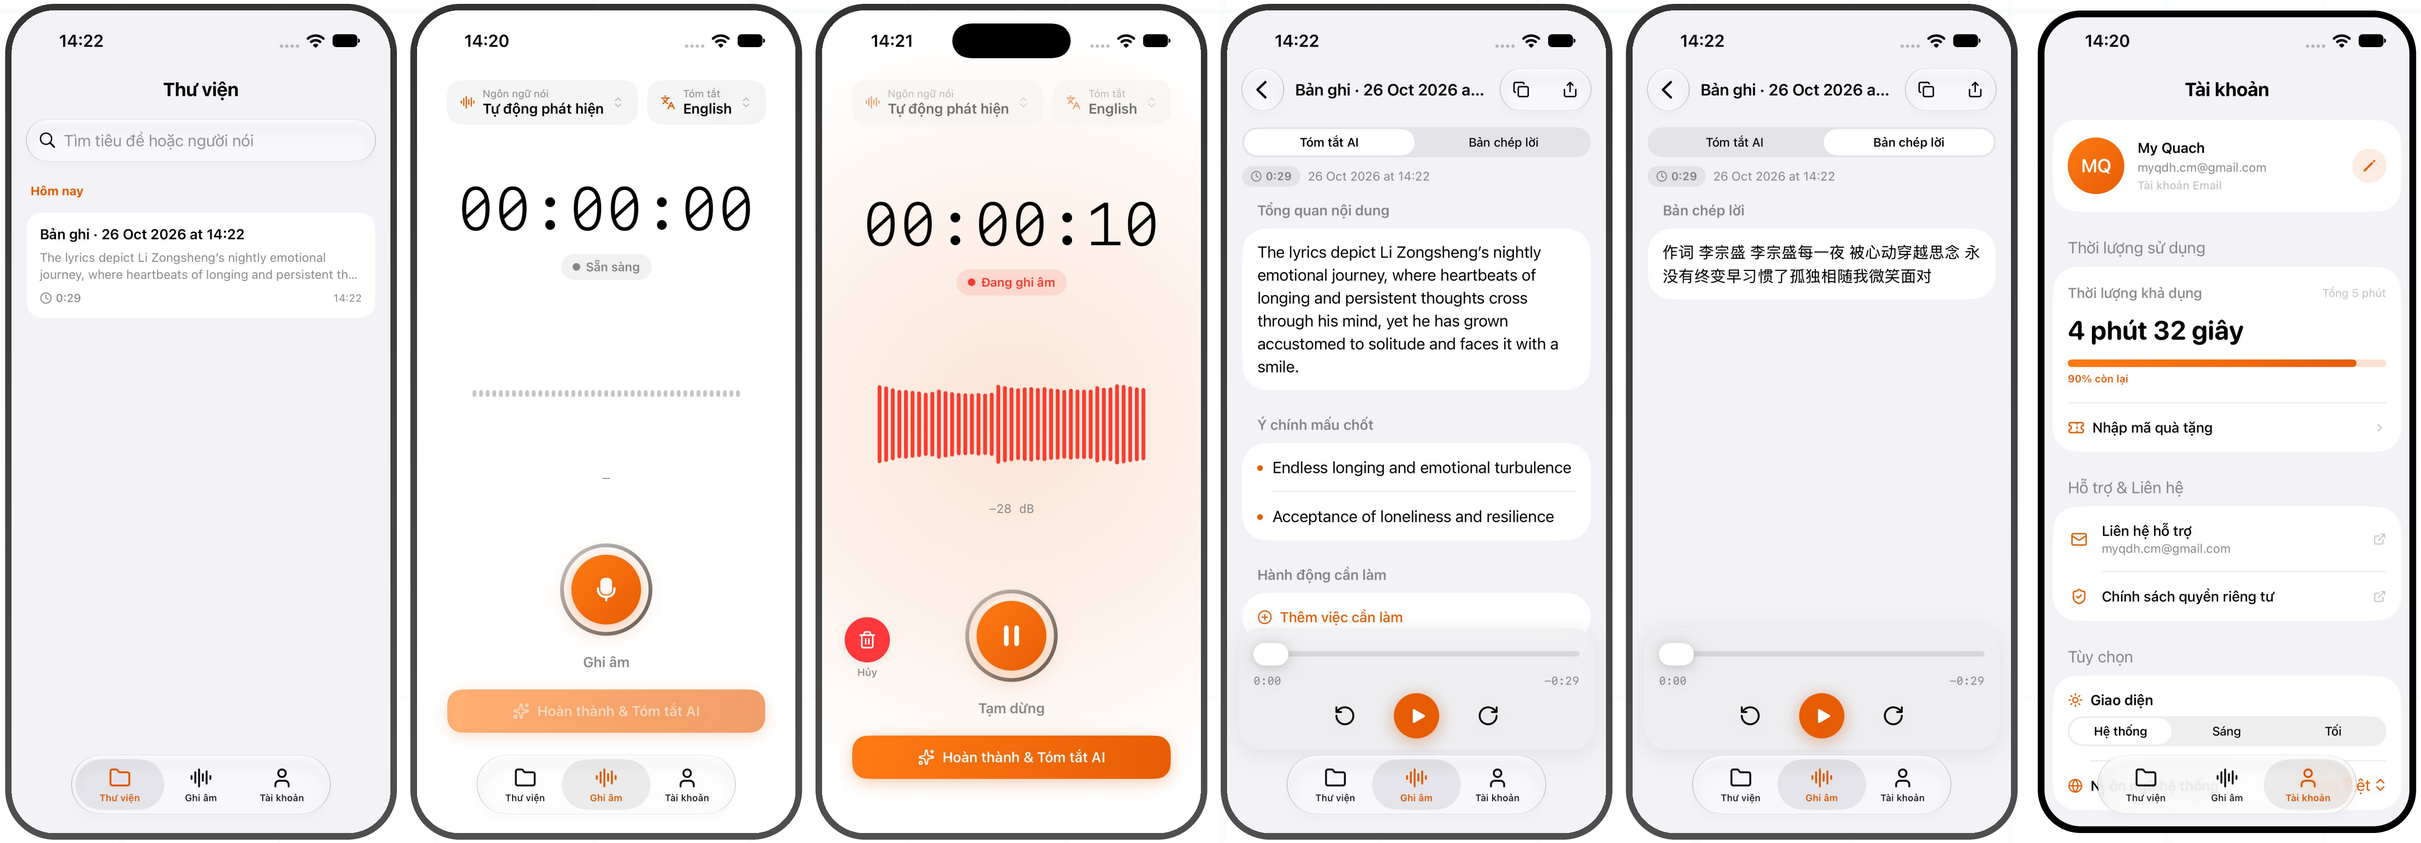
Records meetings and lectures, detects the spoken language, and turns them into editable AI summaries you can copy or share.

Project: AI Record

Hoang My · UI/UX Designer

Key screens

End-to-end user flow from voice recording to real-time transcription and AI-powered key point summaries.



iOS

AI Live Translate

An interpreter app for two-way conversations. Tap to speak, and let the app handle the rest: instant text subtitles and natural voice output for your listener, followed by an immediate turnaround when they speak back. Fluid, responsive, and designed to keep genuine conversation alive.

ROLE
Design & build, end to end

PLATFORM
iOS 17+

BUILT WITH
Native SwiftUI

STATUS
Coming soon on App Store

Key features

Two-way voice translation
Tap a mic and speak naturally

Instant language swap
Switch languages in one tap

Listen to any translation
Hear it read aloud

Conversation history
Revisit any conversation

Light & Dark mode
Comfortable in any setting

Design & build

Designed and vibe-coded end to end by me. Native SwiftUI, with a clean, focused two-way conversation flow.

What it does

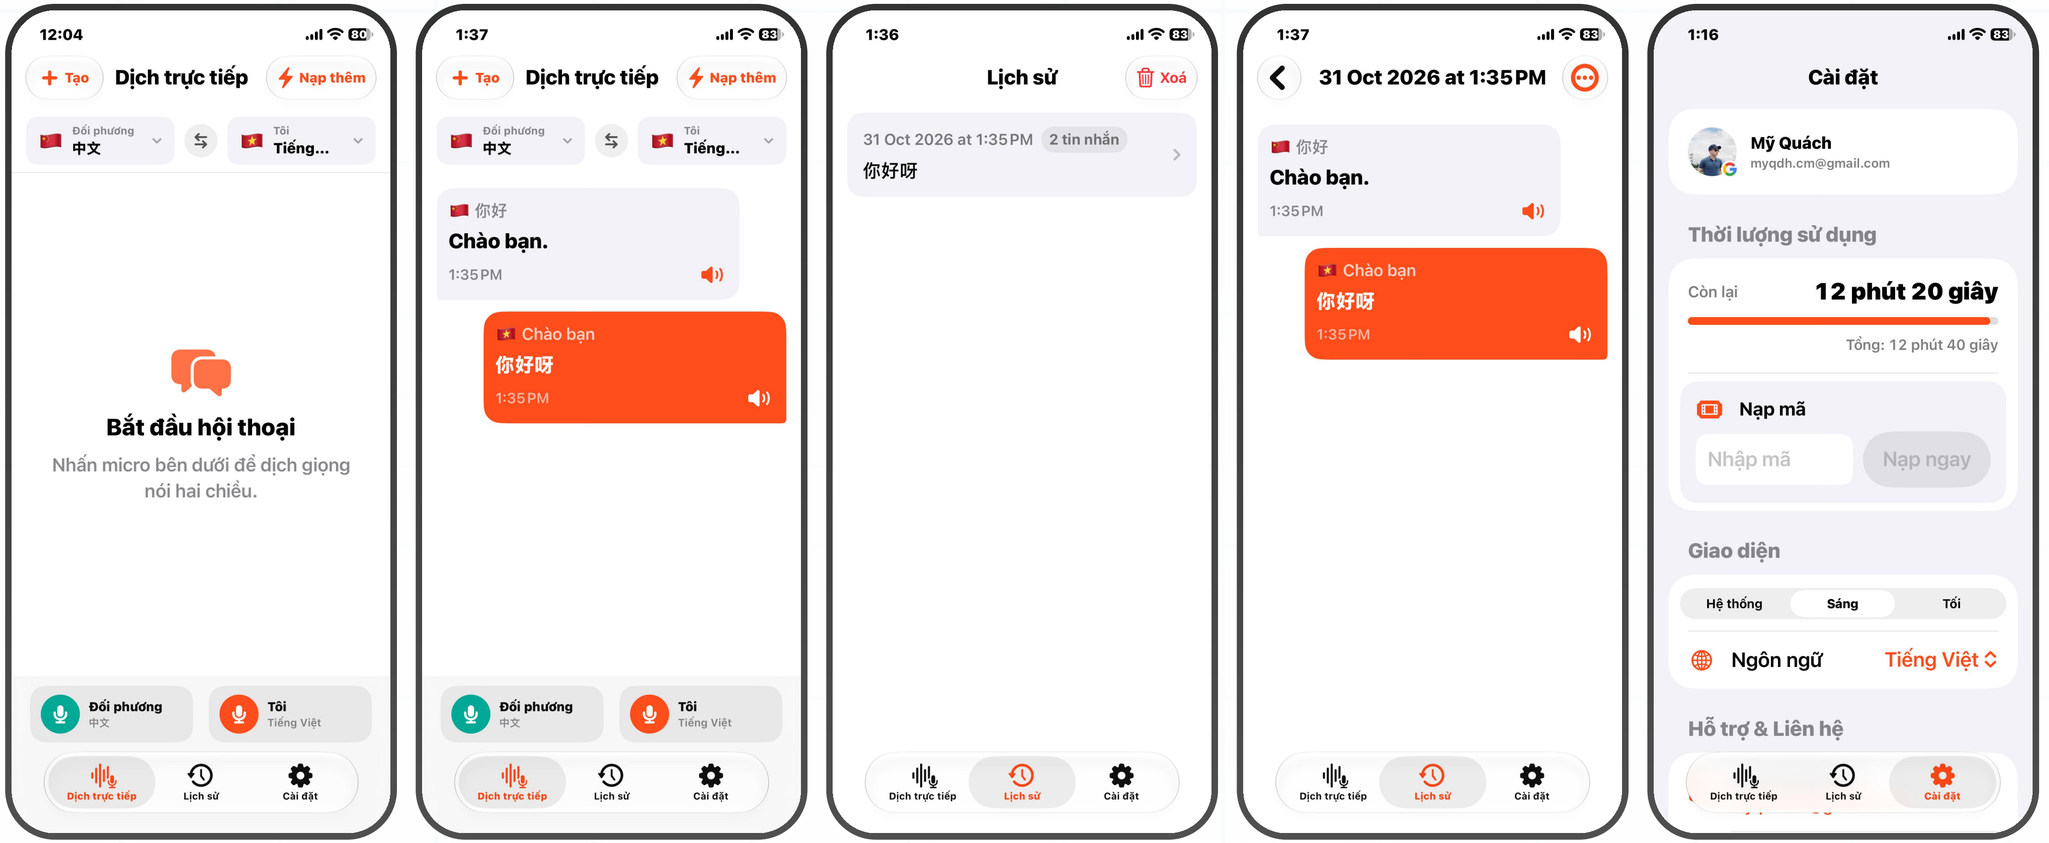
Lets two people talk across languages: each speaks their own, the other reads and hears the translation instantly, and every conversation is kept in history.

Project: AI Live Translate

Hoang My · UI/UX Designer

Key screens

End-to-end user flow from speaking in one language to hearing the translation in another.



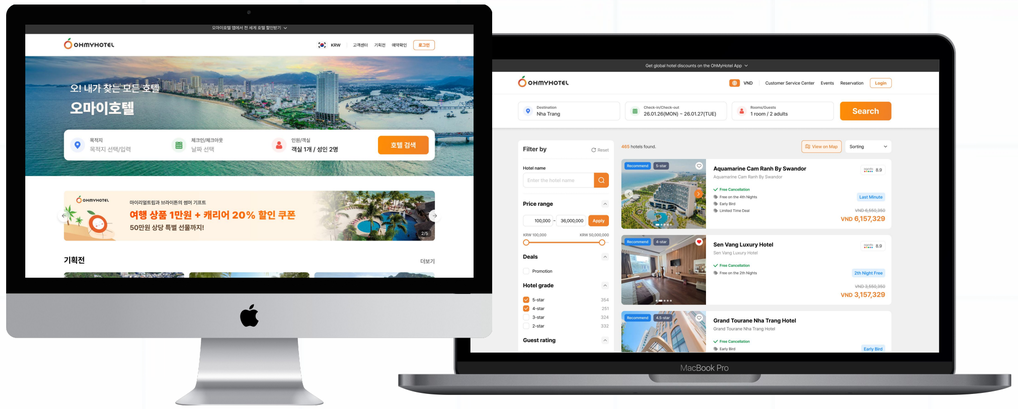
Project: Ohmyhotel

Hoang My · UI/UX Designer

WEBSITE · APPLICATION

Ohmyhotel

Redesigning an omni-channel hotel booking platform (web & mobile) to elevate the user experience, empower marketing conversion, and establishing a multi-brand design system that scales seamlessly across sub-brands.



ROLE
UI/UX & Product Designer

TEAM
1 designer · 1 planner · 4 devs

PLATFORM
Web & Mobile · B2C & B2B

Challenge

- No shared design system: inconsistent fonts, colors, spacing and patterns across web and mobile slowed design and updates.
- A simple, inflexible website that could not support varied campaigns and promotions.
- UI and usability issues hurt consistency across devices.

Goal

- Build a shared design system with reusable components and clear guidelines.
- Redesign the existing interface for a smoother, clearer and more consistent experience.
- Create flexible layouts for campaigns, promotions and content across Asian markets.

What I did

- Led end-to-end UI/UX for web & mobile, B2C and B2B products.
- Built the design system and responsive layouts to speed up development.
- Turned user needs into wireframes, prototypes and final designs, backed by user research and A/B testing.
- Partnered with stakeholders on strategy and design handoff.

Scalable design system

Reusable components and guidelines improved consistency across web and mobile, cut repetitive design work and made updates easier.

Better user experience

Redesigned key flows and fixed UI and usability issues for a clearer, smoother experience across devices.

Better marketing support

Flexible layouts and reusable components make campaigns, promotions and localized content faster to create.

Project: Ohmyhotel

Hoang My · UI/UX Designer

Spotting friction by testing as a user

Found by walking through search, booking and checkout as an end user, then fixing it with the team.

MOBILE SEARCH

“Go” key didn’t trigger search

PROBLEM Pressing “Go” on the iPhone keyboard did not start the search. Users had to tap Apply, an unnecessary extra step.

ACTION Flagged it to the team, proposed mapping “Go” to the same action as Apply, and worked with developers to ship the fix.

RESULT A faster, more natural search flow, and a friction point caught that no bug report would have surfaced.

CHECKOUT POPUP

“Cancel” vs “Close” confusion

PROBLEM Both buttons had overlapping meaning. Even someone who knows the product hesitated over whether “Close” would cancel the booking.

ACTION Simplified to one clear action, “Cancel booking”. Presented the issue and fix to the team before building.

RESULT Removed a real point of confusion in a critical step, lowering the risk of accidental cancellations.

One design system, many brands

Shared across Ohmyhotel, Ohmytrip to keep the experience consistent and simplify development.

Logo
Custom variations per sub-brand

Colors
Shared tokens for brand colors, UI.

Typography
Pretendard with multiple font weights

Form components
Reusable Inputs, selectors, controls

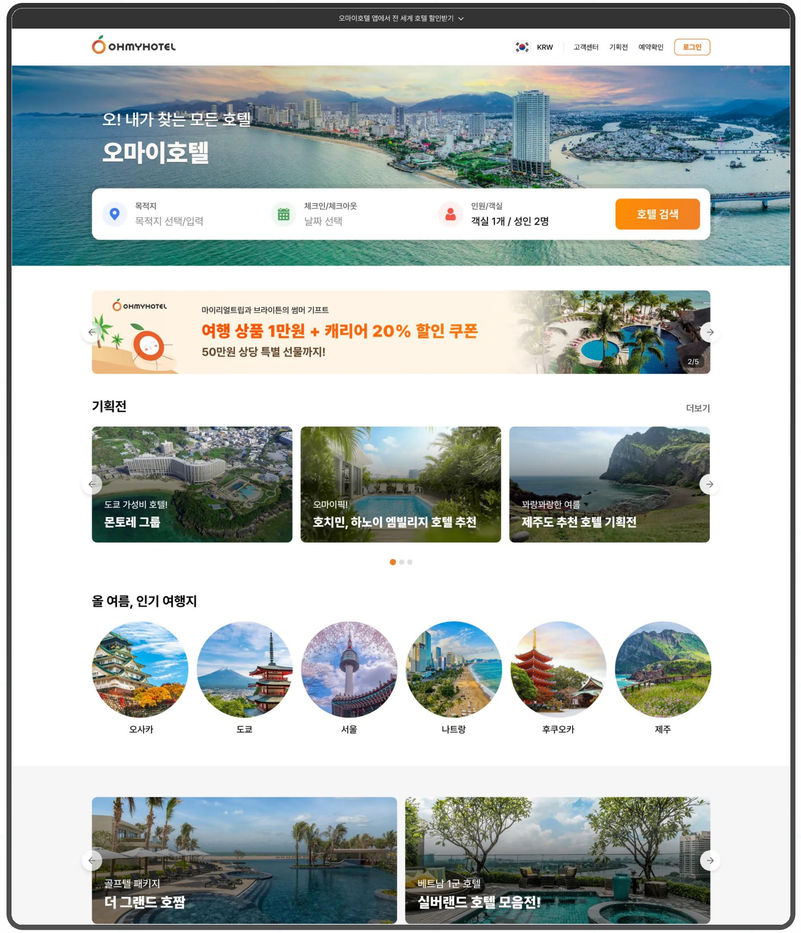
Takeaway: I catch friction early by using the product like a user, solve it with the team, and scale the fix through a shared design system.

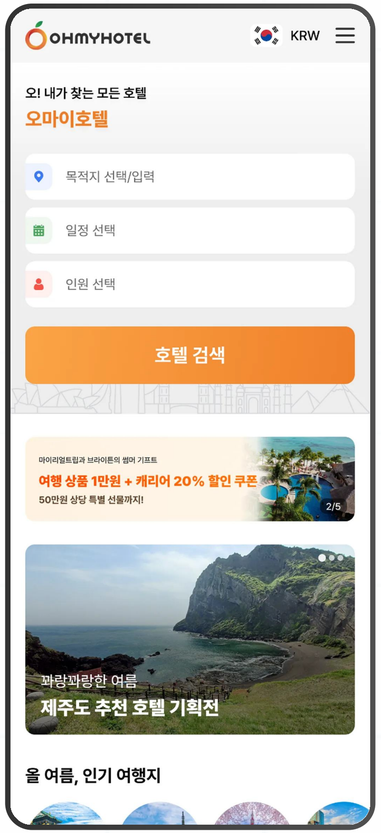
Project: Ohmyhotel

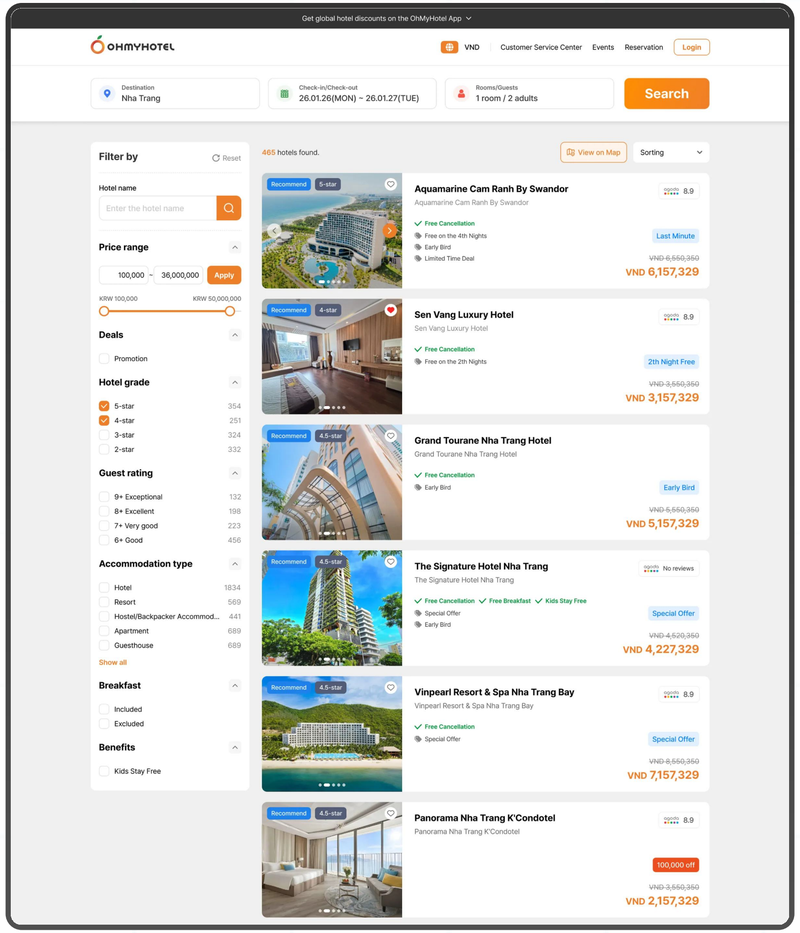
Hoang My · UI/UX Designer

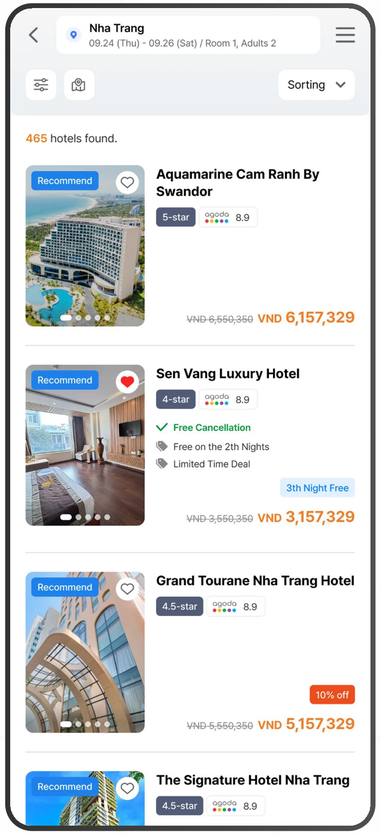
Search, redesigned for web & mobile

Search fields grouped in one area; results combine filters, sorting and key info (photos, ratings, benefits, price) in a single view.









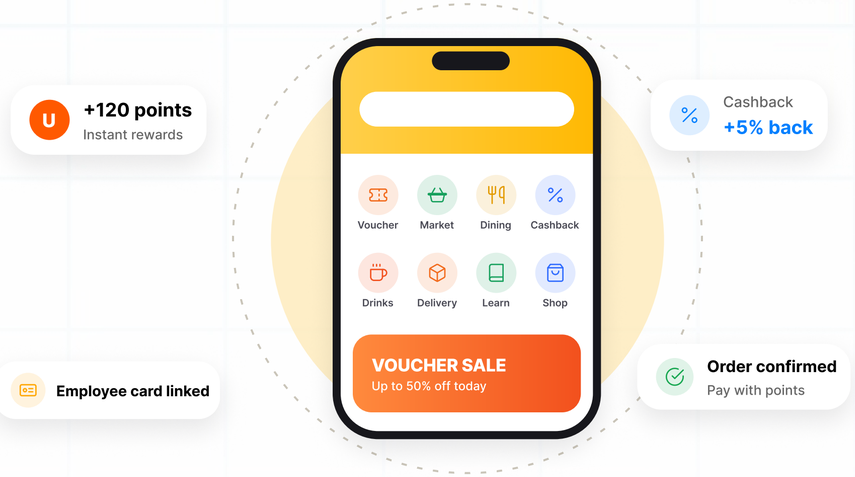
Project: Utop

Hoang My · UI/UX Designer

Web · iOS · Android

Utop

Order your favorite meals, buy fresh groceries from local markets, and pay in seconds. Connect directly with nearby restaurants, supermarkets, and shops around your home or office—and get cashback every time you spend.



ROLE
UI/UX designer

TEAM
1 PM · 1 BA · 2 designer · 4 devs · 3 testers

PLATFORM
Web & Mobile app

What I did

- Redesigned key app features to fix major payment and order-tracking issues, making the app much smoother and easier to use.
- Designed and maintained the Utop web ordering platform, consistent across all devices.
- Created mobile campaign pages for big partners, delivering fast, quality designs under tight deadlines.
- Worked closely with stakeholders so every design detail was implemented accurately.

Key flows

Food & dining
Browse a restaurant, pick dine-in or delivery, and order in three steps.

Grocery shopping
Choose a trusted local market and pick fresh produce by weight.

UtopBACK cashback
Shop at partner stores and track cashback.

Employee card linking
Tap a card, scan the QR and link an account.

Core ordering flow

01 Home
Discover & search

02 Discover
Restaurant details

03 Voucher
Redeem & earn points

04 Store
Order builder

05 Cart
Review & checkout

06 Payment
Select payment method

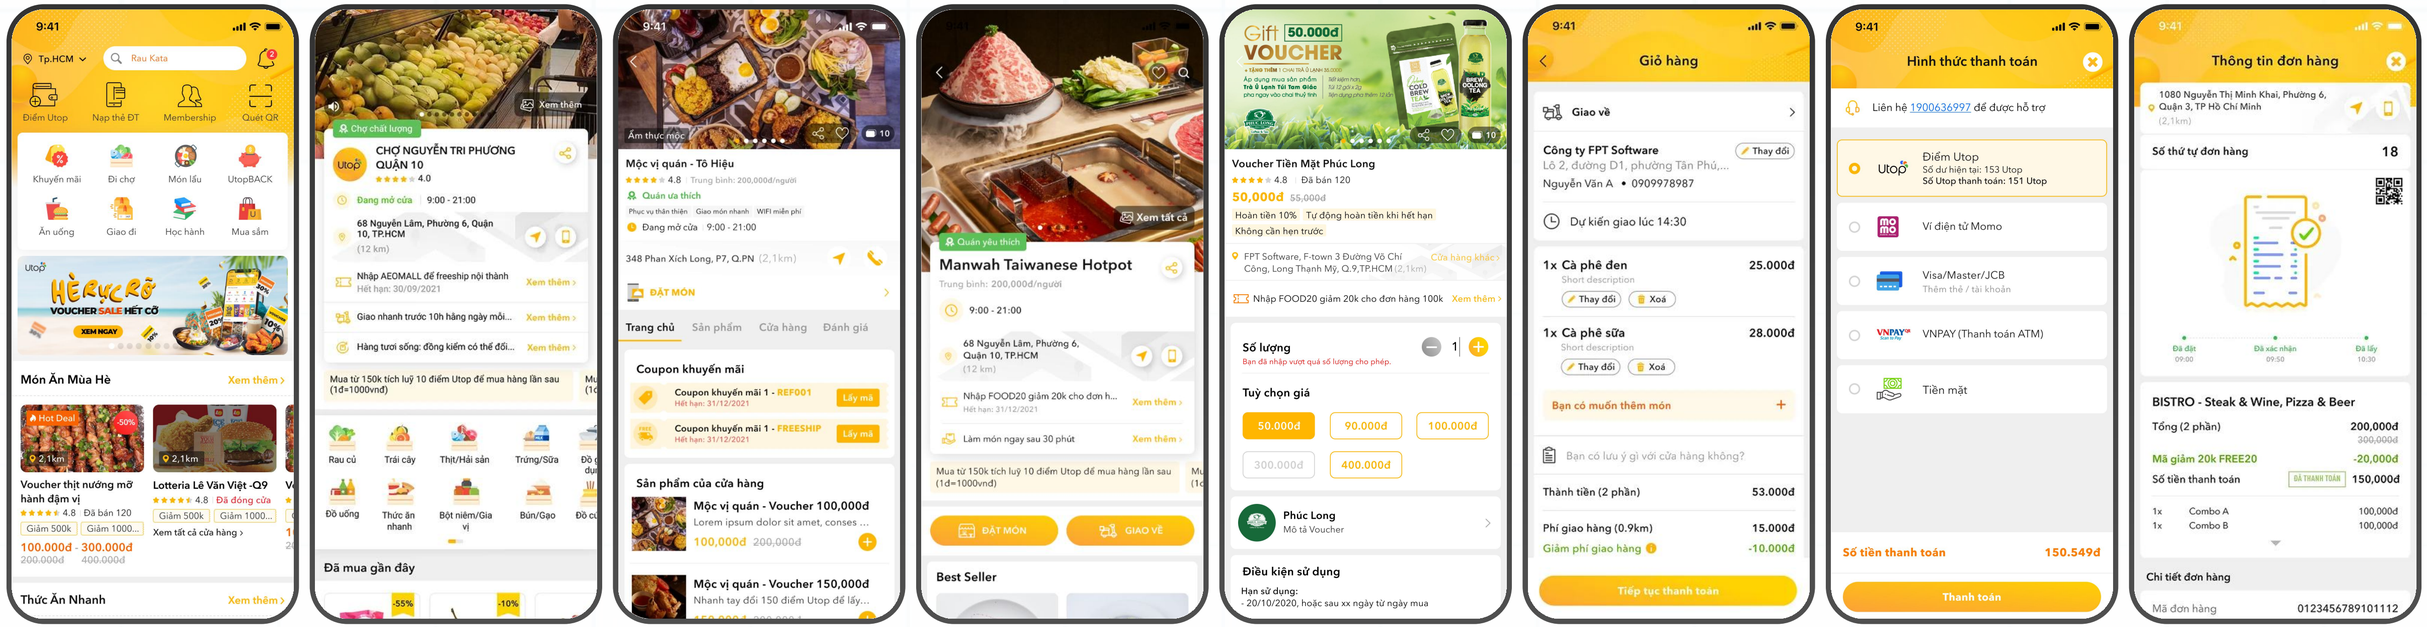
07 Confirmation
Order confirmed

Project: Utop

Hoang My · UI/UX Designer

UI Screens

Comprehensive user flow covering marketplace discovery, store details, promotion/voucher redemption, and cart management.



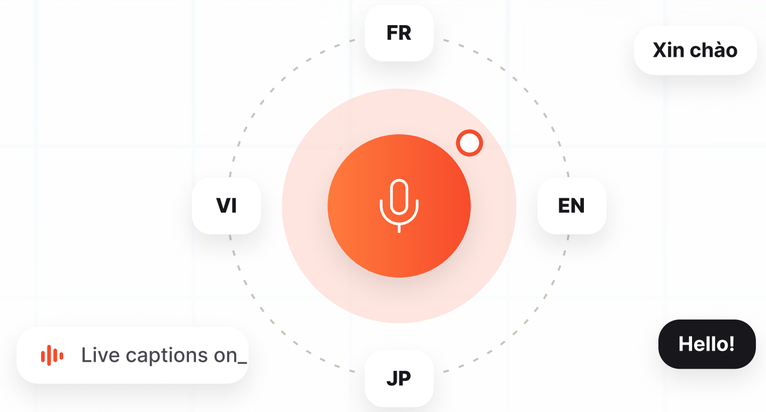
Project: Livestran

Hoang My · UI/UX Designer

UI / UX Case study

LiveTrans

Never miss a word during video calls, webinars, or global events. The app listens as people speak and shows instant, translated subtitles live on screen. Everyone can follow along, understand clearly, and join the conversation in their own language without language barriers.



ROLE
UI/UX designer

TEAM
1 designer · Japan team

PLATFORM
Web & Mobile web

THE PROBLEM

Don’t let language barriers slow down your meetings.

When audiences speak different languages, slow translation and missing captions make people lose track. Conversations stall and engagement drops. LiveTrans brings real-time captions, instant translation and live interaction into a single view, all on screen.

THE SOLUTION

Three pillars of the experience

Live captions
Speech turns into text and translation instantly, while the speaker is still talking.

Q&A & comments
Attendees ask questions, react and reply inside the event feed, publicly or privately.

Join with a QR code
Scan a code to join in seconds. No app install, no complicated sign-up.

Result: a tight, consistent system built to speak many languages
From onboarding to the admin dashboard, one visual language keeps captions, not the interface, as the first thing viewers notice.

Project: Livestran

Hoang My · UI/UX Designer

From joining the room to the closing note

Six key moments in the mobile flow, kept simple so captions stay the main focus of the screen.

STEP 01

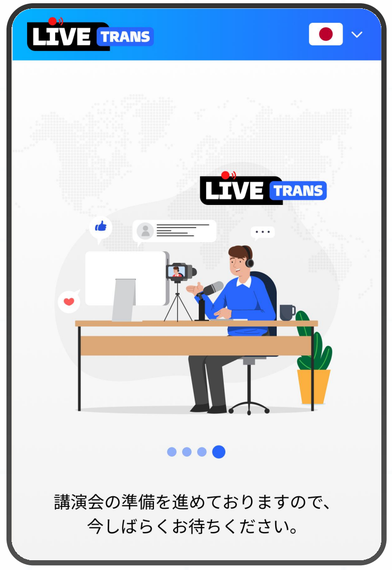
Set up profile

Display name & your language

STEP 02

Waiting room

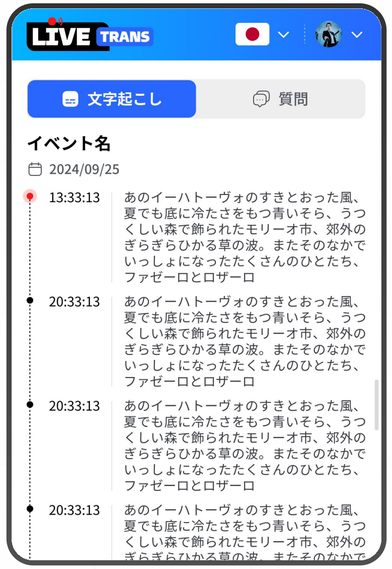
Waiting for the talk to start



STEP 03

Live captions

Live text & translation



STEP 04

Q&A

Filter by all, liked or personal

STEP 05

Send a comment

Quick replies right in the chat

STEP 06

Wrap-up

A closing note ends the session

Running events from the browser

Event room: transcript and comments side by side

Captions are logged by timestamp on the left, so organizers follow the content and the reaction at once.

Join: one scan to get in

The QR code sits beside a friendly loading illustration, softening the wait before the room opens.

Setup: pick languages at creation

Set the spoken language and default display language per event, with multiple languages at once.
